# Quick Start Instructions for the AP4118 Rail Tag Programmer

1. **Plug in round power plug from transformer (*see drawing to right*). Plug one end of the power cord into transformer and the other end into a standard AC outlet.**

2. **Plug in serial cable to the RS–232 port. Connect the other end to computer. *Use only the serial cable supplied with the AP4118 programmer! If you use the cable and null-modem adapter from an AP4110 Tag Programmer, the AP4118 will not communicate.***

3. **Switch on power. The POWER LED lights green and stays lit as long as tag programmer is powered up.**

4. **After about 10 to 12 seconds, the READY LED lights green and stays lit (*see drawing to left*). The programmer is ready for operation.**

5. **Plug in banana connector for anti-static wrist strap. Always wear wrist strap when programming tags. See Chapter 2 of the *AP4118 Rail Tag Programmer User Guide* for more anti-static protection information.**

6. **Launch your programming application.**
